  - ▶  `MS24xx_fun.h` should contain the declarations of functions, and data structures such as a “struct” or array or linked-list *etc.*
  - ▶  `MS24xx_fun.c` should contain the implementation of functions

# Submission

- ▶ **Submission Deadline: 19 October 2025, Sunday, 00:00 hrs**
- ▶ You get full 8 weeks to work on it – **Strictly Individual**
- ▶ Use **C**
- ▶ At most **5** files:
  - ▶ `MS24xx_main.c` should contain the main function
  - ▶ `MS24xx_param.h` should contain the macro definitions, enum items and parameters
  - ▶ `MS24xx_fun.h` should contain the declarations of functions, and data structures such as a “struct” or array or linked-list *etc.*
  - ▶ `MS24xx_fun.c` should contain the implementation of functions
  - ▶ Must have a **Makefile** !

# Description

- ▶ The objective of this simulation project is to present a chance to apply and understand what you have learnt in the course

# Description

- ▶ The objective of this simulation project is to present a chance to apply and understand what you have learnt in the course
- ▶ We will use a simple LAN containing  $3 \leq N \leq 26$  hosts

# Description

- ▶ The objective of this simulation project is to present a chance to apply and understand what you have learnt in the course
- ▶ We will use a simple LAN containing  $3 \leq N \leq 26$  hosts
- ▶ This is a specific requirement

# Description

- ▶ The objective of this simulation project is to present a chance to apply and understand what you have learnt in the course
- ▶ We will use a simple LAN containing  $3 \leq N \leq 26$  hosts
- ▶ This is a specific requirement
- ▶ However, in the **Viva** you should be able to explain other scenarios, even outside your own specific assignments but within the syllabus

- ▶ Vivas will be after Diwali 😊

# About the Technical Details

- ▶ A detailed technical overview document is uploaded to Moodle

# About the Technical Details

- ▶ A detailed technical overview document is uploaded to Moodle
- ▶ It explains the idea, requirements, what needs to be implemented, expected outcome *etc.*

# About the Technical Details

- ▶ A detailed technical overview document is uploaded to Moodle
- ▶ It explains the idea, requirements, what needs to be implemented, expected outcome *etc.*
- ▶ You are free to choose your own data structures and algorithms

# About the Technical Details

- ▶ A detailed technical overview document is uploaded to Moodle
- ▶ It explains the idea, requirements, what needs to be implemented, expected outcome *etc.*
- ▶ You are free to choose your own data structures and algorithms
- ▶ However, the simulator must work for any general input within the ranges specified

# About the Technical Details

- ▶ A detailed technical overview document is uploaded to Moodle
- ▶ It explains the idea, requirements, what needs to be implemented, expected outcome *etc.*
- ▶ You are free to choose your own data structures and algorithms
- ▶ However, the simulator must work for any general input within the ranges specified
- ▶ User of the simulator code must have the complete control over the proceedings of the simulations

End of this session ...

Wish you all the best!
